

## **Landing page**

This will be the page that visitors to the website will see when they are not logged in. To view their playlists the user first needs to login. This means that there is no alternative view to the playlist/home pages. To access those the user has to be logged in.

## **Home page**

The idea is that the top of the page changes colour based on the colour of the art that the user has chosen for the playlist, meaning that the colour will change with the current playlist that is being played.

The current track controls will be sticky to the bottom of the page. This is difficult to show in a pdf.

Clicking on the cover art for a playlist will take the user to the playlist page.

Clicking on the profile image in the corner of the screen will take the user to the settings page.

## **Playlist page**

The playlist page allows the user to view the songs in the playlist. Here the user can also add new songs. Clicking on any song will play the song in the playlist.

It is also possible to see who has added the song to the playlist.

## **Audio controls**

The audio controls on songs are pretty standard. An icon is visible on the right side that allows the user to add the song to a playlist.

## **Profile page**

The settings/profile page can be accessed by clicking on the profile image. Here the user can change their profile picture. There is no explicit button, but hovering over the image changes the saturation, this will provide feedback to the user that they can click in the image to edit it.

There are other options on the left side, like friends and playlists. Though not designed, these pages will allow the user to view and add friends, and create and remove playlists.
